```

### 10 Notes

# 0.1 Modular Multiplicative Inverse

- If gcd(a, m) = 1, then let ax + my = gcd(a, m) = 1 (Bezout's Theorem). Then  $ax \equiv 1 \pmod{m}$ .
- If gcd(a, m) = 1, then  $a \cdot a^{\phi(m)-1} \equiv 1 \pmod{m}$  (Euler's Theorem).
- If *m* is prime, then  $\phi(m) = m 1$ , so  $a * a^{m-2} \equiv 1 \pmod{m}$ .

#### 10.2 Chinese Remainder Theorem

We are given  $N = n_1 n_2 \cdots n_k$  where  $n_i$  are pairwise coprime. We are also given  $x_1 \cdots x_k$  such that  $x \equiv x_i \pmod{n_i}$ . Let  $N_i = N/n_i$ . There exists  $M_i$  and  $m_i$  such that  $M_i N_i + m_i n_i = 1$  (Bezout). Then, there is only one solution x, given by:  $x = \sum_{i=1}^k a_i M_i N_i$ 

### 10.3 Euler's Totient Function

Positive integers up to a given integer n that are relatively prime to n.  $\varphi(n) = n \prod_{p|n} \left(1 - \frac{1}{p}\right)$  where the product is over the distinct prime numbers dividing n.

### 10.4 Möebius

If 
$$F(n) = \sum_{d|n} f(d)$$
, then  $f(n) = \sum_{d|n} \mu(d)F(n/d)$ .

### 10.5 Burnside

Let  $A: GX \to X$  be an action. Define:

• w := number of orbits in X.

- $S_x := \{ g \in G \mid g \cdot x = x \}$
- $F_g := \{x \in X \mid g \cdot x = x\}$

Then  $w = \frac{1}{|G|} \sum_{x \in X} |S_x| = \frac{1}{|G|} \sum_{g \in G} |F_g|$ .

### 10.6 Landau

There is a tournament with outdegrees  $d_1 \le d_2 \le ... \le d_n$  iff:

- $d_1 + d_2 + \ldots + d_n = \binom{n}{2}$
- $d_1 + d_2 + \ldots + d_k \ge {k \choose 2}$   $\forall 1 \le k \le n$ .

In order to build it, let 1 point to 2, 3, ...,  $d_1 + 1$  and repeat recursively.

### 10.7 Erdös-Gallai

There is a simple graph with degrees  $d_1 \ge d_2 \ge ... \ge d_n$  iff:

- $d_1 + d_2 + ... + d_n$  is even
- $\sum_{i=1}^{k} d_i \le k(k-1) + \sum_{i=k+1}^{n} \min(d_i, k) \quad \forall 1 \le k \le n.$

In order to build it, connect 1 with  $2, 3, \dots, d_1 + 1$  and repeat recursively.

### 10.8 Gambler's Ruin

In a game in which we win a coin with probability p and lose a coin with probability q := 1 - p, the game stops when we win B ou lose A coins. Then  $Prob(\text{win B}) = \frac{1 - (p/q)^B}{1 - (p/q)^{A+B}}$ .

### 10.9 Extra

• Fib(x + y) = Fib(x + 1)Fib(y) + Fib(x)Fib(y - 1)
